

# Extra Practice Key

## Modeling Division (Complete groups)

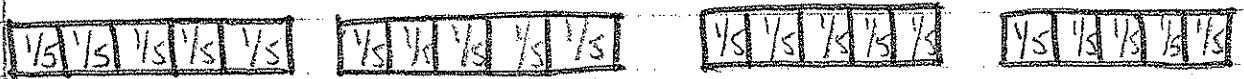

Ex 1  $4 \div \frac{2}{5}$

How many groups of  $\frac{2}{5}$ 's are in 4 wholes?

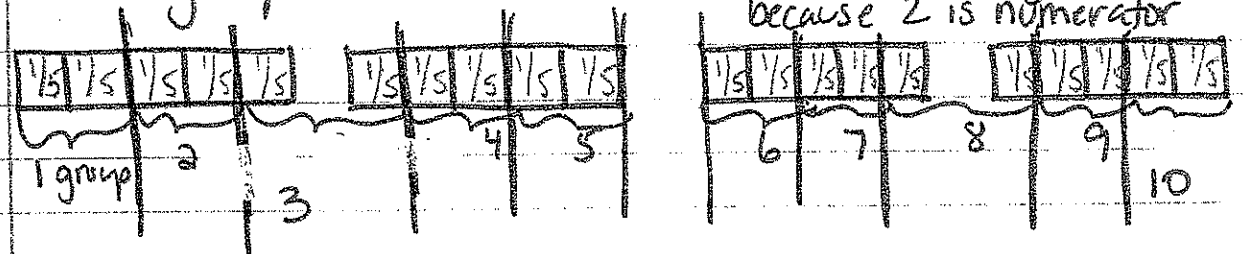

① Draw 4 wholes

② Divide into 5<sup>ths</sup> because that is the denominator

③ Find groups of  $\frac{2}{5}$ 's  $\checkmark$  2  $\rightarrow$   $\frac{1}{5}$ 's in each group because 2 is numerator

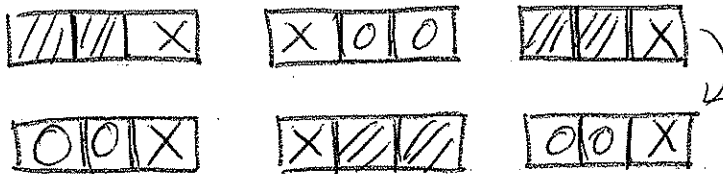

There are 10 groups of  $\frac{2}{5}$ 's in 4

$$4 \div \frac{2}{5} = 10$$

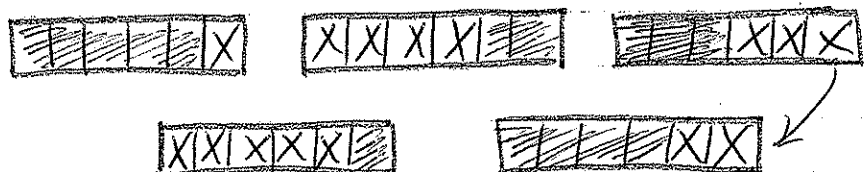

you try:

①  $6 \div \frac{2}{3} =$   
9 groups

②  $5 \div \frac{5}{6} =$

6 groups

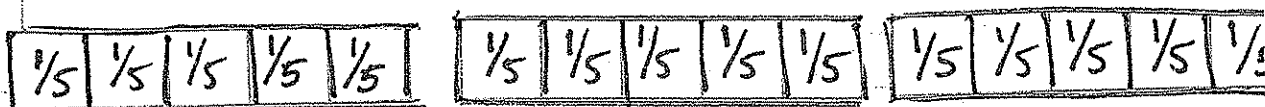

# Modeling Division (incomplete groups)

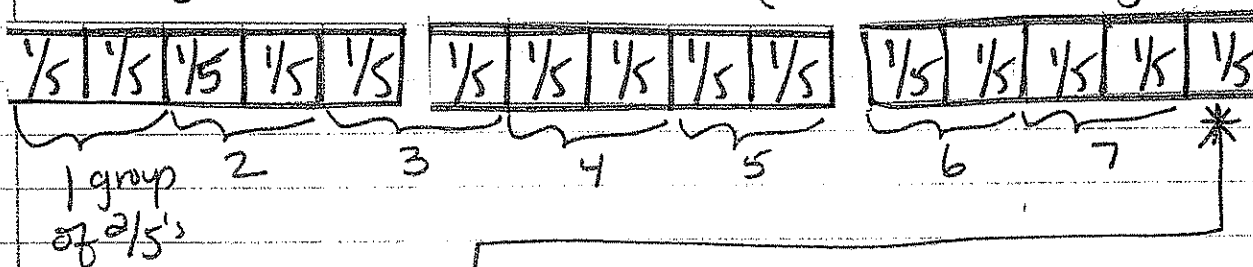

Ex2  $3 \div \frac{2}{5}$

How many groups of  $\frac{2}{5}$ 's are in 3 wholes?

- ① Draw 3 wholes, then divide into 5<sup>ths</sup> because that is the denominator.

- ② Find groups of  $\frac{2}{5}$ 's <sup>groups of 2  $\rightarrow$  numerator</sup>  
(2  $\rightarrow$   $\frac{1}{5}$ 's per group)

7 whole groups of  $\frac{2}{5}$ 's

\* What about this  $\frac{1}{5}$  that

doesn't make a whole group?

- We need 2 but only have 1
- We have 1 out of the 2
- We have  $\frac{1}{2}$  left so,...

Note:

since  $\frac{2}{5}$  is our group use numerator as new denominator for partial groups

7 wholes  $\frac{1}{2}$  of another

There are  $7\frac{1}{2}$  two-fifths in 3 wholes.

you try (circle numerator - it will be denominator of partial group)

c)  $5 \div \frac{2}{3} = 7 \frac{1}{2}$

1 of group of 2  
1 left over  $\rightarrow \frac{1}{2}$

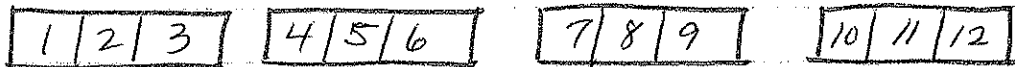

d)  $4 \div \frac{3}{5} = 6 \frac{2}{3}$

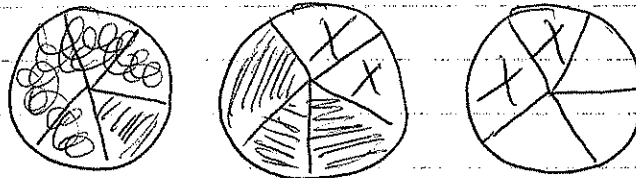

2 of group of 3 left over so you have  $\frac{2}{3}$  left of a group

e)  $4 \div \frac{1}{3} = 12$

f)  $3 \div \frac{4}{5} = 3 \frac{3}{4}$

3 left over out of group of 4 so  $\frac{3}{4}$

g)  $4 \div \frac{2}{5} = 10 \text{ groups}$
